

mAsset

Ultimate Mobile Asset-Management pack.

With mAsset, there's no more need for paper-managing your assets, no more space for mistyping or overlooking your them.

mAsset brings you everything you need for workflow organization of the asset management processes. If you've come across the processes at least once, you can imagine, what types of risks it holds- like mislabeling an asset without the ability of a fast check in SAP, miscounts of the assets, or an asset misplace. Analysing the Inventory-check results on paper also usually takes much longer, and requires more human supervision, than the modern techniques of stock-taking, or general asset management.

Mobile part of the solution (mAsset Mobile) stands for the first application certified by SAP (SAP Certified Mobile App®) developed in Czech Republic.

Key features of mAsset

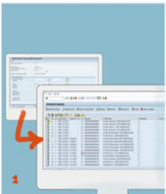

- ✓ physical inventory check
- ✓ structured review of all your assets in all directories
- ✓ QR- / bar-code based
- ✓ GEO-location for assets & directories
- ✓ commissioning & decommissioning assets
- ✓ photo attachments
- ✓ the package consists of Mobile & back-end version of the app. mAsset ERP is fully functional even without the mobile scenario.
